Introduction

QuizMos is a simple **command-line flashcard manager** that helps you create, review, and organize flashcards for effective studying and memorization.

It allows you to add, list, and remove flashcards—each containing a question and an answer—all directly from your terminal.

QuizMos automatically saves your flashcards to a file, ensuring your collection is preserved and ready every time you run the program.

Quick Start

1. Ensure you have Java 17 or above installed in your Computer.
Mac users: Ensure you have the precise JDK version prescribed [here](#).
2. Download the latest .jar file from [here](#).
3. Copy the file to the folder you want to use as the *home folder* for your QuizMos.
4. Open a command terminal, cd into the folder you put the jar file in, and use the `java -jar quizmos.jar` command to run the application.
A CLI similar to the below should appear. Note how the App gives you the first step.

```

>
Hello, I'm QuizMos

  / _ \ _ _ ( ) _ | V | _ _ _
| | | | | | | _ / | V | | / _ V _ |
| | | | | | | / / | | | ( ) \ _ \
 \ _ \ \ _ _ | / _ | | | \ _ / | _ /
Try command `help` for more information

```

5. Type some commands to execute it. Some example commands you can try:
 - `help` : Shows all command formats.
 - `list` : Lists all flashcards.
 - `add q/1+1 a/2` : Add your first flashcard. With question is "1+1" and answer is "2".
 - `exit` : Exits the app
6. Refer to the [Usage](#) below for details of each command.

Features

Quizmos supports:

- Creating basic flashcards with text-based questions and answers.
- Marking flashcards as important/starred for easy review.
- Listing all flashcards for an overview.
- Deleting flashcards by their index.
- Searching flashcards using keywords or keyphrases.
- Reviewing flashcards in multiple modes: Simple Flip, True/False (T/F), and Multi-Choice Question (MCQ).
- Exiting the program gracefully.

Usage

For now, Quizmos only supports creating basic flashcards with text based questions and answers.

Notes about the command format:

- Words in `UPPERCASE` are the parameters to be supplied by the user.
- Items in square brackets are optional
- Parameters **MUST** be in order
- Extraneous parameters for commands that do not take in parameters (`help` , `list` , `exit` ...) will be ignored.
- If you are using a PDF version of this document, be careful when copying and pasting commands that span multiple lines as space characters surrounding line-breaks may be omitted when copied over to the application.

View help: `help`

Shows a list of command

Format: `help`

List all flashcards: `list`

Shows a list of flashcards

Format: `list`

Add a flashcard: `add`

Add flashcard with a question and answer

Format: `add q/QUESTION a/ANSWER`

Delete a flashcard: `delete`

Delete a flashcard with its index, can check by `list` command

Format: `delete INDEX`

Search for flashcards: `search`

Search flashcards by keyword or keyphrase

Format: `search KEYPHRASE`

Review: `review`

To begin the review:

Format: `review m/[FLIP | TF | MCQ]`

- the mode is case-insensitive
- `FLIP` : Simple flip mode
- `TF` : True/False mode
- `MCQ` : Multi-choices question mode

Example:

- review m/FLIP
- review m/tf
- review m/mCq

Simple flip mode

After each question showed, can select whether to show the answer (y/n), or quit the session

Format: [Y | N | QUIT]

True/false mode

After each question showed, type your answer (t/f) or quit the session

Format: [T | F | QUIT]

- T True
- F False

MCQ mode

This mode requires flashcard list has no less than 4 flashcards

After each question showed, type your answer (1/2/3/4) or quit the session

Format: [1 | 2 | 3 | 4 | QUIT]

- 1 Answer 1
- 2 Answer 2
- 3 Answer 3
- 4 Answer 4

Star/flag flashcard: star

Star/flag a flashcard by its index.

The flashcard starred will now have "Starred" as its status shown whenever it is listed/displayed.

The starred flashcard is also updated in the stored file.

Format: star INDEX

Example:

- star 1
- **Output:**

Starred this flashcard:
 Question: 1 | Answer: 1 | Starred

Unstar flashcard: unstar

Unstar a flashcard by its index.
The unstarred flashcard will now have an empty status shown whenever it is listed/displayed.
The unstarred flashcard is also updated in the stored file.

Format: unstar INDEX

Example:

- unstar 2
- **Output:**

▶

Unstarred this flashcard:
Question: 2 | Answer: 2 |

Retrieve all starred flashcards: getstar

Retrieve all starred flashcards.

Format: getstar

Example:

- getstar
- **Output:**

▶

These are your starred flashcards:
1. Question: 1 | Answer: 1 | Starred

Exit the program: exit

Exit the program

Format: exit

Command Summary

Action	Format, Examples
Add	add q/QUESTION a/ANSWER

Action	Format, Examples
